Cover Letter to Reviewer 1

Round 2 Revision

Manuscript: "Content-Conditioned Invariant Feature-Statistic Augmentation: Unifying Robustness and Weight Averaging for Domain Generalization" (CIFA)
Journal: *Electronics* (MDPI) **Manuscript ID:** electronics-4654208
Date: 3 November 2026

Dear Reviewer 1,

We are grateful for your positive recommendation and for identifying the single remaining issue, the readability of the figures. We have addressed it fully. Your comment and our point-by-point response follow; the location tag at the start of the response gives the exact pages of the tracked PDF (`CIFA_Electronics_tracked.pdf`), which uses continuous line numbering.

Point 1 — Readability of the figures

Comment. *Portions of the curves are obscured by legends or overlapping graphical elements. Reposition legends outside the plotting areas, use distinguishable line styles, colors, and markers, add enlarged panels or zoomed-in insets where curves overlap, and ensure readability at the final publication size.*

[Tracked PDF: Figures 1–7, Pages 7, 14, 25, 29, 30, 33, 34]

Response. We have redrawn all seven figures as publication-ready vector graphics, with every data point unchanged. Each requested action has been applied:

(1) **All figures checked and redrawn** from the identical source data with a uniform print specification;
(2) **Legends moved outside the plotting area** (Figures 2, 6, 7), so no curve is occluded;
(3) **Distinguishable line styles and markers**, with increased marker size, line width, and cap size;
(4) **Zoomed inset retained** for the closely overlapping coverage panel (Figure 2b, zoom 3×10);
(5) **Readability at publication size**, verified through single- and double-column print-size previews.

The figure locations are: Figure 1 (Page 7), Figure 2 (Page 14), Figure 3 (Page 25), Figure 4 (Page 29), Figure 5 (Page 30), Figure 6 (Page 33), and Figure 7 (Page 34). We confirm that the underlying values are identical to the authoritative results and that no data were re-sampled.

We thank you once again for your time and guidance, and hope the revised figures fully meet your expectations.

Sincerely,
Qingsong Cai (on behalf of all authors)
