Response to Editors and Reviewers

Round 3 Revision

Manuscript: "Content-Conditioned Invariant Feature-Statistic Augmentation: Unifying Robustness and Weight Averaging for Domain Generalization" (CIFA)
Journal: *Electronics* (MDPI) **Manuscript ID:** electronics-4654208
Date: 6 November 2026

Dear Editors and Reviewers,

We thank you for the third-round assessment. Reviewers 1 and 3 have no further requests, and Reviewer 2 finds the manuscript suitable for *publication after careful editorial revision*, with no new point-by-point items. We have therefore treated this round as an editorial review only; no scientific content, data, statistical result, or conclusion has been changed.

All Round 3 edits are marked in the tracked manuscript (`CIFA_Electronics_tracked.pdf`), additions in blue and deletions in red with a strikethrough. The manuscript uses continuous line numbering in the right margin, and the location tags below refer to that file.

A full editorial review of both manuscripts found the text otherwise clean, with only two minor items, both now corrected.

Editorial item 1 — Decimal formatting in Table A3

[Tracked PDF: Page 39, Table A3, Line 1298]

The two "Feature moment KL" rows wrote "Wilcoxon .008" without a leading zero, while the main text writes "$p = 0.008$". Both rows now read "Wilcoxon 0.008"; the numerical value is unchanged.

Editorial item 2 — Duplicated sentence in Appendix A

[Tracked PDF: Page 38, Lines 1284–1285]

The sentence on the shared codebase, seeds, splits, and SWAD schedule appeared verbatim in the Table 3 caption and the Appendix A paragraph. The Table 3 caption keeps the full sentence, and the Appendix A occurrence now reads:

> *"All arms share the same unified codebase, seeds, splits, and SWAD schedule (Table 3)."*

Verification

Both manuscripts were rebuilt from scratch with zero errors, zero overfull boxes, and zero undefined references (clean 39 pages, tracked 41 pages). Accepting all tracked changes reproduces the clean version exactly, and the corrected pages were proofread visually.

We confirm that this manuscript is original, has not been published elsewhere, and is not under consideration by any other journal. All authors have approved the revised version and the author list is unchanged. The authors declare no conflict of interest. All data and the reproducible code are publicly available at https://github.com/qsongcai/CIFA.

We remain at your disposal should any further adjustments be needed.

Sincerely, Qingsong Cai (on behalf of all authors)
